SUMMARY

Web developer with 1+ year of professional experience, moving from frontend work into Laravel backend development, and now targeting junior Laravel/PHP roles. Built REST API endpoints and a blog platform with Laravel at work, and built full-stack projects on my own: an e-commerce platform, an event ticketing system with Stripe payments and role-based access, and a course lead-generation website. Self-directed learner: taught myself Laravel and React Native from documentation. Solid JavaScript and React foundation.

EXPERIENCE

Web Designer - World Academy for Research and Development Apr 2025 - Jun 2026

- Designed and maintained responsive websites using HTML, CSS, Bootstrap and JavaScript, ensuring cross-browser and multi-device compatibility.
- Learned Laravel on the job and, in the last months of the role, built a blog platform with Laravel, Blade and MySQL, including REST API endpoints for content management.
- Developed a cross-platform Android app with React Native (Expo) to support student engagement and internal workflows, learning the framework independently from documentation.

PROJECTS

higherstudies.uk - Course listing and lead generation platform Solo project (frontend + backend)

- Designed and built the whole site alone: a public course catalogue plus an admin side for uploading and managing courses, modules and universities.
- Visitors register interest in a course; their details are captured as leads for the admin team to follow up and sell to directly.

E-commerce Platform - Laravel, Blade, JavaScript, MySQL ecommerce.kmalamin.xyz

- Full-stack store with product and category management, cart, orders, authentication and Mollie payment integration.
- Structured with Laravel's MVC architecture, with live deployment and source on GitHub.

Event Management and Ticket Booking - Laravel, Blade, Stripe event.kmalamin.xyz (ongoing)

- Implemented event creation, admin permissions, social and email/password login, authorization and role-based access.
- Building QR-based ticket verification, PDF ticket generation and Stripe payments, with an organizer dashboard.

SKILLS

Backend: PHP, Laravel, REST APIs, MVC, authentication and authorization, Stripe and Mollie payments

Database: MySQL, Firebase

Frontend: JavaScript, React, Blade, Bootstrap, Tailwind CSS, HTML, CSS

Tools: Git, GitHub, Postman, VS Code

EDUCATION

Diploma in Engineering (Computer) - Tangail Polytechnic Institute 2025 (BTEB)

CGPA 3.67 / 4.00

Secondary School Certificate (Science) - Dublia High School, Rajshahi 2020 Board

GPA 4.89 / 5.00
